

EVALUATING A PROJECT ON INTERCULTURAL AND INTERRELIGIOUS DIALOGUE THROUGH ICT DEVICES

Jaap Scheerens

University of Twente, the Netherlands

j.scheerens@utwente.nl

Evaluation Orientations

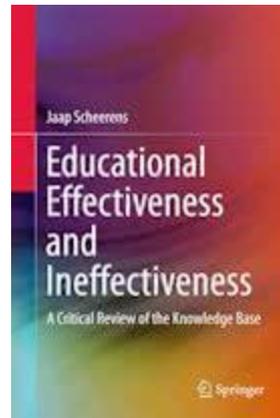

Before	Analytic evaluation (conceptual model, program theory) Stake holder identification Evaluability analysis
During	Monitoring Formative evaluation Engaged description of processes (demonstration project)
After	Outcome only evaluation Outcome pre-post analysis Process/Outcome analysis (attribution of outcomes to process or input characteristics)

The value of initial conceptualization at this stage (analytic evaluation)

- Clarification of key concepts defining the nature of the program; e g a “device” in the sense of norms, tasks, tools and atmosphere
- Pre-thinking on essential means and goals
- Basis for further choices about evaluation type, key factors, data collection and eventual measurement
- Hand in hand with program development

Some examples

- Input and process variables in effective teaching (Scheerens, 2016)
- Potential outcome variables in 21st century skills (Scheerens, 2017)
- Process outcome model on “Informal learning for active citizenship” (Scheerens, 2009)

Teacher background characteristics	Classroom ecology and climate	Teaching processes
<p>Professional knowledge</p> <ul style="list-style-type: none"> – content knowledge – pedagogical knowledge – insight in student learning – professional content knowledge <p>Professional motivation</p> <ul style="list-style-type: none"> – work satisfaction – locus of control <p>Preferred teaching styles</p> <ul style="list-style-type: none"> – direct teaching – “constructivist” teaching 	<ul style="list-style-type: none"> – class size – classroom composition (average and heterogeneity) – match of teachers and classes – aspects of classroom climate, achievement orientation, discipline, support, ethos – teacher expectations on students’ achievement 	<p>Pro-active strategies</p> <ul style="list-style-type: none"> – opportunity to learn – selection and design of adequate learning tasks – technology enriched learning environments <p>Interactive strategies</p> <ul style="list-style-type: none"> – classroom management aimed at optimizing active learning time and opportunity to learn – optimizing structure and independence in teaching – learning to use learning strategies – allowing for manageable adaptivity in teaching – active teaching, diversity in preparation formats – a challenging presentation; cognitive activation; – enacting high expectations <p>Retroactive strategies</p> <ul style="list-style-type: none"> – setting realistic motivating standards – progress monitoring and assessment – adaptive testing – instrumental feedback

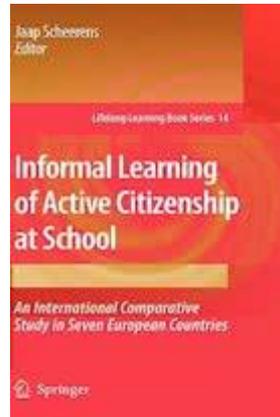

Figure 1: a first rough and arbitrary charting of non-cognitive attributes considered in education, related to 21st century skills

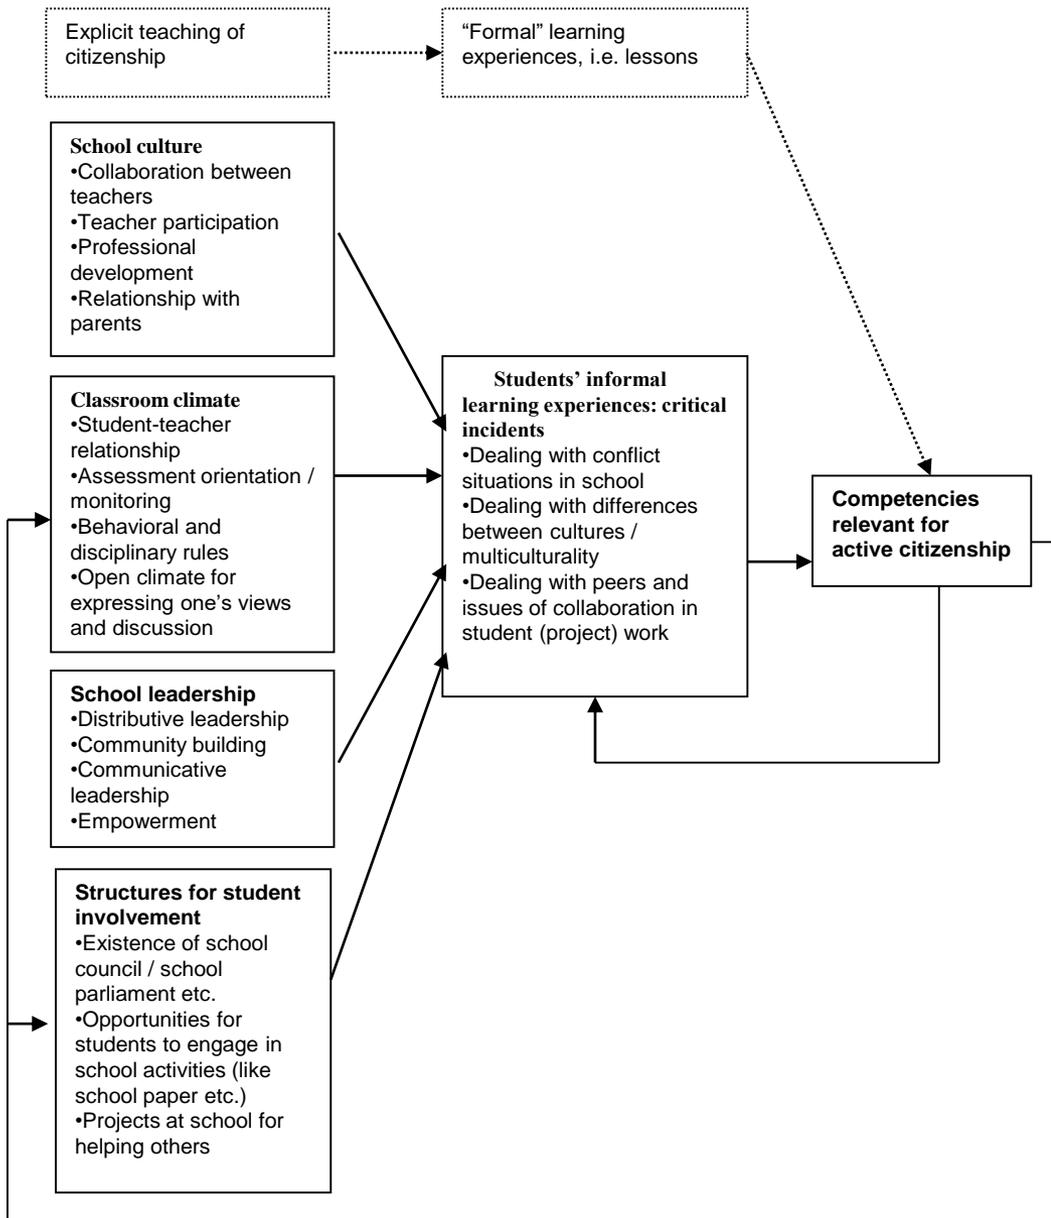

Areas of modernization	Social skills	Emotional skills	motivational	Character education
ICT (literacy, ethics, wellness)	Cooperative skills	Self-awareness, emotional literacy	Self-esteem, internal locus of control, self-management skills	intelligence
Citizenship (democratic values, intercultural skills)	adaptability, flexibility	creativity	Engagement, intrinsic motivation	Conscientiousness Locus of control
Global competencies (tolerance, cosmopolitanism, commitment to peace)	leadership skills	Basic goodness	Conscientiousness, Perseverance, "grit"	mindfulness
Entrepreneurship (financial skills)		Emotional intelligence	resilience	curiosity

Informal Learning of Active Citizenship at School

An International Comparative Study in Seven European Countries (2009)

Jaap Scheerens (ed.)

Conclusions; tentative recommendations

- Consider degree of structure and independence of teaching/learning situations
- Select evaluation orientation accordingly; given complexity and richness of the contents of the project, perhaps a descriptive demonstration orientation could be a first approach to be considered
- Development of content analysis of registered digital material (.e. the conversations between students)
